Energy performance certificate (EPC)

157, Dumfries Street Treherbert TREORCHY CF42 5PT	Energy rating	Valid until: Certificate number:	12 March 2030 9898-5073-6247-8040-8254	
Property type				

End-terrace house

Total floor area

70 square metres

Rules on letting this property

Properties can be let if they have an energy rating from A to E.

You can read guidance for landlords on the regulations and exemptions (https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

Energy efficiency rating for this property

This property's current energy rating is D. It has the potential to be B.

See how to improve this property's energy performance.

Score	Energy rating	Current	Potential
92+	Α		
81-91	B		87 В
69-80	С		
55-68	D	67 D	
39-54	E		
21-38	F		
1-20		G	

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

For properties in England and Wales:

- the average energy rating is D
- the average energy score is 60

Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says "assumed", it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

Feature	Description	Rating
Wall	Sandstone or limestone, as built, no insulation (assumed)	Poor
Roof	Pitched, 270 mm loft insulation	Good
Roof	Flat, no insulation (assumed)	Very poor

Energy performance certificate (EPC) – Find an energy certificate – GOV.UK

Feature	Description	Rating	
Window	Fully double glazed	Good	
Main heating	Boiler and radiators, mains gas	Good	
Main heating control	Programmer, room thermostat and TRVs	Good	
Hot water	From main system	Good	
Lighting	Low energy lighting in all fixed outlets	Very good	
Floor	Solid, no insulation (assumed)	N/A	
Secondary heating	None	N/A	

Primary energy use

The primary energy use for this property per year is 304 kilowatt hours per square metre (kWh/m2).

What is primary energy use?

Additional information

Additional information about this property:

- Stone walls present, not insulated
- Dwelling may be exposed to wind-driven rain

Environmental impact of this property

This property's current environmental impact rating is D. It has the potential to be B.

Properties are rated in a scale from A to G based on how much carbon dioxide (CO2) they produce.

Properties with an A rating produce less CO2 than G rated properties.

An average household produces

6 tonnes of CO2

This property produces

3.8 tonnes of CO2

This property's potential production

1.6 tonnes of CO2

By making the <u>recommended changes</u>, you could reduce this property's CO2 emissions by 2.2 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

Improve this property's energy performance

By following our step by step recommendations you could reduce this property's energy use and potentially save money.

Carrying out these changes in order will improve the property's energy rating and score from D (67) to B (87).

Do I need to follow these steps in order?

Step 1: Internal or external wall insulation

Internal or external wall insulation

Typical installation cost

Typical yearly saving

Potential rating after completing step 1

Step 2:	Floor	insulation	(solid	floor)

Floor insulation (solid floor)

Typical installation cost

Typical yearly saving

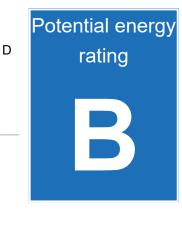

Potential rating after completing steps 1 and 2

Step 3: Solar water heating

Solar water heating

Typical installation cost

£4,000 - £6,000

£4,000 - £14,000

73 | C

£158

£4,000 - £6,000

75 | C

£32

Typical yearly saving

Potential rating after completing steps 1 to 3 76 | C Step 4: Solar photovoltaic panels, 2.5 kWp Solar photovoltaic panels Typical installation cost £3,500 - £5,500 Typical yearly saving £328 Potential rating after completing steps 1 to 4 87 | B Paying for energy improvements Find energy grants and ways to save energy in your home. (https://www.gov.uk/improve-energy-efficiency) Estimated energy use and potential savings Estimated yearly energy cost for this property £826 Potential saving

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

The potential saving shows how much money you could save if you complete each recommended step in order.

For advice on how to reduce your energy bills visit Simple Energy Advice (https://www.simpleenergyadvice.org.uk/).

Heating use in this property

Heating a property usually makes up the majority of energy costs.

Estimated energy used to heat this property

£217

Type of heating	Estimated energy used	
Space heating	12931 kWh per year	
Water heating	1842 kWh per year	
Potential energy savings by installing insulation		
Type of insulation	Amount of energy saved	

Solid wall insulation

3608 kWh per year

Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
