

Energy performance certificate (EPC)

2 YORK PLACE
YORK STREET
EAST MARKHAM
NG22 0QW

Energy rating

G

Valid until 1 November 2030

Certificate number

0510-8129-6009-0282-3202

Property type	Semi-detached house
----------------------	---------------------

Total floor area	66 square metres
-------------------------	------------------

Rules on letting this property

You may not be able to let this property

This property has an energy rating of G. It cannot be let, unless an exemption has been registered. You can read [guidance for landlords on the regulations and exemptions \(https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance\)](https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

Properties can be rented if they have an energy rating from A to E. The [recommendations section](#) sets out changes you can make to improve the property's rating.

Energy efficiency rating for this property

This property’s current energy rating is G. It has the potential to be C.

[See how to improve this property’s energy performance.](#)

The graph shows this property’s current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher this number, the lower your carbon dioxide (CO2) emissions are likely to be.

The average energy rating and score for a property in England and Wales are D (60).

Breakdown of property’s energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says 'assumed', it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

Feature	Description	Rating
Wall	Solid brick, as built, no insulation (assumed)	Very poor
Roof	Pitched, no insulation	Very poor
Window	Single glazed	Very poor
Main heating	Room heaters, dual fuel (mineral and wood)	Very poor
Main heating control	No thermostatic control of room temperature	Poor
Hot water	Electric immersion, off-peak	Average
Lighting	Low energy lighting in all fixed outlets	Very good
Floor	Solid, no insulation (assumed)	N/A
Secondary heating	None	N/A

Primary energy use

The primary energy use for this property per year is 1176 kilowatt hours per square metre (kWh/m²).

► [What is primary energy use?](#)

Primary energy use is a measure of the energy required for lighting, heating and hot water in a property. The calculation includes:

- the efficiency of the property's heating system

- power station efficiency for electricity
- the energy used to produce the fuel and deliver it to the property

Environmental impact of this property

One of the biggest contributors to climate change is carbon dioxide (CO₂). The energy used for heating, lighting and power in our homes produces over a quarter of the UK's CO₂ emissions.

An average household produces

6 tonnes of CO₂

This property produces

17.0 tonnes of CO₂

This property's potential production

3.6 tonnes of CO₂

By making the [recommended changes](#), you could reduce this property's CO₂ emissions by 13.4 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

How to improve this property’s energy performance

Making any of the recommended changes will improve this property’s energy efficiency.

If you make all of the recommended changes, this will improve the property’s energy rating and score from G (1) to C (77).

Potential energy
rating

C

► [What is an energy rating?](#)

An energy rating shows a property’s energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher this number, the lower your CO2 emissions are likely to be.

Recommendation 1: Increase loft insulation to 270 mm

Increase loft insulation to 270 mm

Typical installation
cost

£100 - £350

Typical yearly
saving

£587

Potential rating
after carrying out
recommendation 1

1 | G

Recommendation 2: Internal or external wall insulation

Internal or external wall insulation

Typical installation cost	£4,000 - £14,000
Typical yearly saving	£956
Potential rating after carrying out recommendations 1 and 2	 20 G

Recommendation 3: Floor insulation (solid floor)

Floor insulation (solid floor)

Typical installation cost	£4,000 - £6,000
Typical yearly saving	£159
Potential rating after carrying out recommendations 1 to 3	 24 F

Recommendation 4: Draught proofing

Draught proofing

Typical installation cost	£80 - £120
Typical yearly saving	£76

**Potential rating
after carrying out
recommendations
1 to 4**

27 | F

Recommendation 5: Solar water heating

Solar water heating

**Typical installation
cost**

£4,000 - £6,000

**Typical yearly
saving**

£83

**Potential rating
after carrying out
recommendations
1 to 5**

28 | F

Recommendation 6: Double glazed windows

Replace single glazed windows with low-E double glazed windows

**Typical installation
cost**

£3,300 - £6,500

**Typical yearly
saving**

£242

**Potential rating
after carrying out
recommendations
1 to 6**

37 | F

Recommendation 7: High performance external doors

High performance external doors

Typical installation cost	£1,000
----------------------------------	--------

Typical yearly saving	£44
------------------------------	-----

Potential rating after carrying out recommendations 1 to 7	38 F
---	--------

Recommendation 8: Solar photovoltaic panels, 2.5 kWp

Solar photovoltaic panels

Typical installation cost	£3,500 - £5,500
----------------------------------	-----------------

Typical yearly saving	£344
------------------------------	------

Potential rating after carrying out recommendations 1 to 8	50 E
---	--------

Recommendation 9: Wind turbine

Wind turbine

Typical installation cost	£15,000 - £25,000
----------------------------------	-------------------

Typical yearly saving	£720
------------------------------	------

Potential rating after carrying out recommendations 1 to 9	77 C
---	--------

Paying for energy improvements

[Find energy grants and ways to save energy in your home.](https://www.gov.uk/improve-energy-efficiency)
(<https://www.gov.uk/improve-energy-efficiency>)

Estimated energy use and potential savings

Estimated yearly energy cost for this property	£3472
---	-------

Potential saving	£2147
-------------------------	-------

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

The estimated saving is based on making all of the recommendations in [how to improve this property's energy performance](#).

For advice on how to reduce your energy bills visit [Simple Energy Advice](https://www.simpleenergyadvice.org.uk/) (<https://www.simpleenergyadvice.org.uk/>).

Heating use in this property

Heating a property usually makes up the majority of energy costs.

Estimated energy used to heat this property

Space heating	22338.0 kWh per year
----------------------	----------------------

Water heating	1861.0 kWh per year
----------------------	---------------------

Potential energy savings by installing insulation

Type of insulation	Amount of energy saved
---------------------------	-------------------------------

Loft insulation	4080 kWh per year
-----------------	-------------------

Type of insulation	Amount of energy saved
--------------------	------------------------

Solid wall insulation	6649 kWh per year
-----------------------	-------------------

You might be able to receive [Renewable Heat Incentive payments \(https://www.gov.uk/domestic-renewable-heat-incentive\)](https://www.gov.uk/domestic-renewable-heat-incentive). This will help to reduce carbon emissions by replacing your existing heating system with one that generates renewable heat. The estimated energy required for space and water heating will form the basis of the payments.

Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.

Assessor contact details

Assessor's name	Andrew Precious
-----------------	-----------------

Telephone	07791161778

-------	--

Assessment details

Assessor's declaration	No related party
-------------------------------	------------------

Date of assessment	2 November 2020
---------------------------	-----------------

Date of certificate	2 November 2020
----------------------------	-----------------

Type of assessment	▶ RdSAP
---------------------------	-------------------------

RdSAP (Reduced data Standard Assessment Procedure) is a method used to assess and compare the energy and environmental performance of properties in the UK. It uses a site visit and survey of the property to calculate energy performance.

This type of assessment can be carried out on properties built before 1 April 2008 in England and Wales, and 30 September 2008 in Northern Ireland. It can

also be used for newer properties, as long as they have a previous SAP assessment, which uses detailed information about the property's construction to calculate energy performance.

Other certificates for this property

If you are aware of previous certificates for this property and they are not listed here, please contact us at mhclg.digital-services@communities.gov.uk, or call our helpdesk on 020 3829 0748.

There are no related certificates for this property.
